Software for the 2650

## ADVENTURE

You awaken inside a small chamber with many boulders nearly glowing from the heat radiating from the walls. As you stagger to your feet you notice that the chamber has only one exit, a narrow tunnel leading east, you think. Suddenly as you become fully awake, you are attacked by a blood-thirsty pirate who demands 'Your money for your life' and scurries away into the darkness with your last three weeks work.

After wandering aimlessly for a week it seems, you find yourself in a maze of twisty little tunnels all alike. The oil which fuels your lamp is all but gone. Your trusty sword was lost in a fight with a nasty smelling dwarf. Even the pirate has realised your hopeless situation by leaving you to rot penniless.

And what happened to all those treasures you collected? The precious pearl, the diamonds, the priceless Ming vase? Did the pirate take them all or did you manage to hoard them safely in the house.

What did happen before you awoke in that chamber? Thinking back you can vaguely recall being attacked by an enormous fire-breathing dragon. Surely it must have meant certain death, how could you have survived? Could you have been reincarnated by a power beyond your understanding? You most certainly were.

Your 2650 computer has been playing one of the longest and most painful of all computer games, ADVENTURE, written by John Muir and Peter Curtain.

### System requirements

- . 2650 processor with read write memory between 0400 - 2FFF.
- . Memory mapped display or serial terminal are equally suitable.
- . Standard VHSDOS or MicroDOS disk operating system.

### Ordering details

Mail or telephone order from

MicroByte,  
Box 274,  
Belconnen, 2617.

Phone: (062) 412029

PO Box 274 Belconnen ACT 2616
